Note: **Company name below is an example only**

About the "Verified by GS1"

Frequently Asked Questions of "Verified by GS1"

What is Verified by GS1?

Verified by GS1 is a global registry of Global Trade Item Numbers (GTINs) to verify whether 7 basic attributes are present for a product.

What is the purpose of Verified by GS1?

Verified by GS1 is designed to ensure every product has a unique GTIN assigned to it that has been allocated per GS1's rules and guidelines (as outlined in the GTIN Management Standard) and can be confirmed by trading partners. By registering legacy GTINs and new GTINs with a limited set of attributes that identify the products, Verified by GS1 enables brand owners to confirm the availability of the products' GTINs.

Why was Verified by GS1 created?

A group of companies in the Consumer Goods Forum (CGF) and GS1 came together to challenge the ways they thought about creating and sharing product information to achieve higher data quality, more completeness and easier ways to share information. The participants worked on five pilot projects which ultimately underscored the need for validation of unique identifiers and key attributes – the basic tenets of Verified by GS1.

Who are the users of Verified by GS1?

The users of Verified by GS1 include company's, retailers, marketplaces, brand owners, solution providers, agencies, app developers, industry consortia and others – basically any organization that has a need to either register a product's GTIN, or to verify the brand owner or identity of a GTIN.

What are the benefits of Verified by GS1?

By sharing GTINs and core attribute information through Verified by GS1, Company's, brand owners will now have a single place for retailers, marketplaces and others to verify the presence of attributes for product listings.

Verified by GS1 ensures that a GTIN has been properly constructed and is not duplicated in the system. Additionally, Verified by GS1 checks that the GTIN is licensed to the Company's, brand owner providing the information. Provided the data entered into Data Hub is accurate, this can help aid integrity and security in the listing process and helps to prevent a seller from inadvertently "borrowing" a GTIN from another item for its listing.

In addition, Verified by GS1 will help increase data transparency, operational efficiencies and the overall consumer experience.

How does Verified by GS1 help achieve overall data accuracy?

Verified by GS1 uses validation rules to check the quality and completeness of the GTIN. Additionally, Verified by GS1 applies a global set of validation rules on the attributes provided and conducts a check to make sure that all attributes are complete. The Company's, brand owners who provide the data are solely responsible for the quality of all data in GS1 Saudi Arabia Data Hub | Product and the GS1 Registry Platform.

Company, brand owner, what do they need to do to get started with Verified by GS1?
